

Electronic Visit Verification Provider Survey - FEEDBACK

February to March 2018

Med-QUEST Division (MQD) conducted a voluntary provider survey in February and March 2018. Invitations were distributed through email and various face-to-face encounters, including the Electronic Visit Verification (EVV) information sessions held in February and March 2018. This survey was another way for MQD to gather stakeholder input related to EVV implementation and also a way to learn about the present use of EVV in Hawaii. This survey was also another way that MQD has fulfilled the requirement as stated in section 120006 of the 21st Century Cures Act to seek stakeholder input. The feedback from this survey was instrumental in designing an EVV system which will best accommodate Hawaii's stakeholders.

From February through March 2018, a total of 31 responses were received. Four questions were asked about EVV awareness, current practices, and concerns about EVV implementation.

More information about EVV in Hawaii can be found at:
