Change Summary
5.29.2009

#	Location	Previously Stated	v2.2 Revision	Source
1	Entire document	-	<revised to eliminate redundant and dated information>	CD v3.2 edit
2	p.1, § 1.1 Document Purpose and § 1.2 Contents of this Companion Document	<entire sections>	<deleted>	CD v3.2 edit
3	p.1, § 1 Introduction, Companion Documents section	-	Companion Documents are intended to supplement the standard HIPAA Implementation Guides and are technical in nature. They are intended for technical staff members who are responsible for electronic transaction/file exchanges. This document provides specific information related to the fields and values reported in the Med-QUEST 270 and 271 transactions.	CD v3.2 edit
4	p.1, § 1 Introduction, Disclaimer section	<Disclaimer subsection moved from § 1.1 Document Purpose>	<Disclaimer subsection moved to § 1 Introduction>	CD v3.2 edit
5	p.3, § 2.1 Transaction Overviews, Processes Replaced or Impacted section	<entire section>	<deleted>	CD v3.2 edit
6	p.4, § 2.2 270/271 Recipient Eligibility Request and Response Transactions, Standard Implementation Guide section	<entire section>	<deleted>	CD v3.2 edit

#	Location	Previously Stated	v2.2 Revision	Source
7	<p>p.4, § 2.2 270/271 Recipient Eligibility Request and Response Transactions, 270 Eligibility Request section, Interactive 270 Requests subsection, last three paragraphs following bulleted list</p>	<p>If more than one set of search criteria is present, the system first attempts to match by Med-QUEST Recipient ID if it is present on the Request. If the Med-QUEST Recipient ID match is unsuccessful, the system attempts a search by the Recipient's SSN. If there is no match, the system will attempt to do an alternate search option using the Recipient's Last Name/First Name/Date of Birth/Gender combination. If there is no match with any criteria set, a "Patient Not Found" message is returned to the requester.</p> <p>In addition to a set of one or more search criteria, a Service Begin Date is required. Optionally, a Service End Date can also be submitted. Because eligibility can change from one day to the next, future Begin or End Dates are not permitted.</p> <p>Med-QUEST edits reject 270 Requests with invalid data (e.g., an invalid Date of Birth). In the interactive mode, requests can be submitted for only one patient at a time.</p>	<p><deleted></p>	<p>CD v3.2 edit</p>

8	p.5, § 2.2 270/271 Recipient Eligibility Request and Response Transactions, 271 Eligibility Response section, Batch 271 Responses subsection following Interactive 271 Repsonse subsection	Batch 271 Eligibility Verification Responses are both data content and data format compliant with HIPAA Transaction and Code Set requirements. Each 2000C Loop and loops subservient to it carry identification, demographic, eligibility, enrollment, Medicare, and TPL information within the requested time frame or a Reject Reason Code and associated data elements that say why a patient eligibility request cannot be processed. Recipient data in batch 271 Transactions is more extensive than data in interactive eligibility responses. Most of the same HIPAA compliant Reject Reason Codes and associated data elements appear on batch 271 Responses as are on interactive Responses. Further information can be found in Section 5.3, 271 Eligibility Response Transaction Specifications.	<deleted>	CD v3.2 edit

#	Location	Previously Stated	v2.2 Revision	Source
21	p.13, § 4.1 General Information, Other Standards section, Member Search subsection	<p>Eligibility Request and Response Tracking</p> <p>In the interactive mode, each eligibility request is for a single individual and is answered by a single immediate response. Tracking of individual patients on requests and responses is not necessary. In the batch mode, however, any number of individual recipients can be included in a single 270 Transaction with response from a single 271.</p> <p>Individual recipients on batch 271 Responses always appear in the sequence in which they are submitted on 270 Requests. In addition, a submitter created Trace Number (TRN02) for each patient is returned on the 271 Response. The Trace Number facilitates matches between patient level request and response data on 270 and 271 Transactions.</p> <p>Since some requests for individual recipients may be valid and others not, Med-QUEST recommends that batch 270 requesters retain their 270 Requests and compare them with 271 Responses in order to track requests and responses at the recipient level. When a request for an individual recipient cannot be processed, Med-QUEST returns an AAA Request Validation Segment with an error code in the 2000C Loop of the 271 Transaction.</p>	<p><u>Member Search</u></p> <p>Med-QUEST requests that Trading Partners include any of the following minimum data sets within a 270 request to perform a member search:</p> <ul style="list-style-type: none"> • Med-QUEST ID + Member Name • Med-QUEST ID + DOB • Med-QUEST ID + SSN • Member Name + DOB • Member Name + SSN • DOB + SSN 	CD v3.2 edit and 2008-0175-02
