HIPAA Privacy Rules

The Health Insurance Portability and Accountability Act of 1996 (HIPAA – Public Law 104-191) and the HIPAA Privacy Final Rule¹ provides protection for personal health information. The regulations became effective April 14, 2003. First Health Services developed HIPAA Privacy Policies and Procedures to ensure operations are in compliance with the legislative mandated.

Protected health information (PHI) includes any health information whether verbal, written, or electronic, that is created, received, or maintained by First Health Services Corporation. It is health care data plus identifying information that allows someone using the data to tie the medical information to a particular person. PHI relates to the past, present, and future physical or mental health of any individual or recipient; the provision of health care to an individual; or the past, present, or future payment for the provision of health care to an individual. Claims data, prior authorization information, and attachments such as medical records and consent forms are all PHI.

The Privacy Rule permits a covered entity to use and disclose PHI, within certain limits and providing certain protections, for treatment, payment, and health care operations activities. It also permits covered entities to disclose PHI without authorization for certain public health and workers' compensation purposes, and other specifically identified activities.
